TOURING SATELLITE SYSTEM

with Fast Dish Alignment

QuickSAT

THE SMALL DISH WITH
BIG POWER

Why QuickSAT

The QuickSAT satellite system allows you to find and lock on to your desired satellite (Astra2 for UK TV line up) within minutes of unpacking every time whatever your location. It is your fast and simple solution to hassle free satellite TV.

QuickSAT Elevation and Alignment System

Built In Loudspeaker

In addition QuickSAT transmits the sound from your TV to the dish, so no more shouts of "anything yet" or "left a bit, right a bit" as you search for the satellite. As you rotate the dish and it locates the desired satellite you will hear the TV burst into life through the dishes built-in speaker.

QuickSAT works with ANY receiver in ANY country.

QuickSAT can work with supplied 12v receiver or Works with ANY TV with integrated Satellite such as AVTEX DRS and Cello Traveller models and even works with SKY and FREESAT receivers as well.

Sized at just 55cm L x 45cm W x 20 cm H the QuickSAT travel bag houses everything you need to watch Digital Satellite TV on the move except the TV itself.

In addition to a sturdy lightweight tripod, optional mounts are available to fix the dish to a wall, pole or table.

QuickSAT Explained

The Small Dish with Big Power

The main advantage of QuickSAT - it's simple and fast to setup and it has better performance than a considerably larger conventional dish

Touring Satellite System with Fast Dish Alignment

The new QuickSAT elevation and alignment system eliminates the problems associated with the more traditional type "satellite finders".

The first thing to recognise is that the UK channel line up is beamed to earth using Astra2 satellite however, the Astra2 satellite has been joined in space by many other satellites and traditional meters and location methods do not clearly distinguish between them, **QuickSAT does.**

In addition some satellites such as ASTRA1 and Hotbird transmit stronger signals than Astra2 so traditional finder systems just lock onto the strongest signal, therefore its highly likely your dish will not be pointing at the right satellite, **QuickSAT solves this.**

Satellites are positioned at varying heights in the sky, so unless your dish is accurately tilted to within +or- 1° the dish will pass by the desired satellite without registering. **QuickSAT only finds the satellite you choose.**

The QuickSAT elevation and alignment system overcomes all the above issues regardless of the angle of the ground or mounting surface.

The QuickSAT elevation device enables exact angle of elevation and the QuickSAT speaker bursts into life as soon as you rotate the dish to the required satellite azimuth degree as indicated by the QuickSAT supplied Satellite direction indicator (SatMAT).

QuickSAT your fast and simple solution to hassle free satellite TV.

QuickSAT Alignment Kit

What is INCLUDED?

- Lightweight 43cm square Flat Dish
- Free To Air pretuned Satellite TV receiver
- QuickSAT elevation and alignment kit
- Sturdy lightweight tripod with ground fixings
- All supplied in a weatherproof travel bag

The **QuickSAT Satellite Kit** includes everything you need to watch Digital Satellite TV on the move except the TV itself. Each kit includes Flat-Dish, sturdy lightweight tripod with ground fixings, pre-tuned 12 volt DC satellite receiver, QuickSAT elevation and alignment kit as well as all required leads and connections.

All of this can be transported and stowed away in the supplied weather-proof travel bag that is almost half the size and weight of the competitions equivalent system. Travel bag size: **55cm L x 45cm W x 20 cm H**
